

We're on the move!

Our new Toronto office lets us keep growing and gives us more space to do our favorite thing: break stuff.

We test and retest, collect and analyze, poke and prod, deconstruct and reconstruct, break and bend, and then double check and triple check until we're fully satisfied that we have extracted every last bit of

information critical to your case. It's dirty work, but it's how we let the evidence speak.

With the experience and knowledge gleaned from over 35,000 cases and 200+ scientific publications, MEA Forensic sets the standard for high quality forensic engineering.

Ask us how we can help you.
