📍 Vancouver

As a Project Coordinator, Hayley Ross provides support to our Collision Reconstruction and Injury Biomechanics groups in Vancouver. From a client's first phone call until the final report is sent, she assists our engineers by setting up new cases, arranging vehicle exams, acquiring the material needed to run tests and organizing calendars. In a nutshell, she takes care of the non-technical details so that our engineers can spend their time "engineering".

Hayley holds a Bachelor's Degree in Psychology from the University of British Columbia. Prior to joining MEA, she was a Research Coordinator at a Forensic Psychiatric Hospital, where she got a taste of forensic study.

"I was drawn to the field of psychology by my love for human connections," she explains. There is no better position to marry both a growing interest in forensic science and a talent for relationship building than as the first point of contact for the clients of MEA Forensic Engineering & Scientists.
