Michael Jun Tian is MEA Forensic's computer systems analyst. From the Vancouver office, he manages network infrastructure, supports software applications and provides user support in all three of the firm's offices.

Michael has been with MEA for six years and works to keep the firm's computing systems up to date. He is continually testing new hardware and programs so that the firm has the latest technologies for its business. "My role is to allow flexibility for MEA's computer users while making sure that connections and data are absolutely secure."

Michael holds Bachelor's and Master's degrees in Computer Science from leading Chinese Universities. He also earned a Master's of Business Administration from Simon Fraser University. "My MBA helped me to understand connections between business initiatives and technical solutions," he says.

Before MEA, Michael provided IT solutions for manufacturing, human resources, and professional service companies.
